CHARITIES

Season 2019-2020

Dear teachers and students,

Thank you for your interest in the King Center Theatre for Youth (TFY) Program. Our mission is to inspire, nurture and sustain a lifelong appreciation for the performing arts among our youth theatre guests. This is accomplished by the diverse array of entertaining and educational performance arts offerings.

The study resource guide is made possible by each artist and their management team to augment the live theatre experience. We hope you find the guide useful as you integrate the experience with your classroom learning.

A live theatrical experience can leave a memorable impact even after the show is over...now, *Let Your Imagination Take You Places!*

We are looking forward to your attendance at the show.

Yours in the arts,

A handwritten signature in black ink, appearing to read 'Karen'.

Karen Wilson  
Director,  
Theatre for Youth Program

## Vocal Trash's - "THINK" Program

"Through popular music and dance, a sure inroad to young minds, Vocal Trash, (the voice for the trash) uniquely promotes green sustainability as well as social awareness, such as anti-bullying, to students globally. And, in turn, inspire our youth to make good choices. Part stage performers, part recycling gurus - the cast is made up of young award-winning professional entertainers that make the subject of green awareness fun and meaningful with lasting results. Created by "green guru", Kelsey Rae, the results from the "THINK" Program have been nothing short of spectacular. Students, sing, dance and drum their way out of each performance inspired and loaded with ideas of how they can be a part of sustainable solutions... They truly pledge to "THINK...before they throw it away!"

"THINK" Program

## About Vocal Trash

Meet Vocal Trash. Best described as, "Glee Meets Stomp", this green minded ensemble asks you to recycle your imagination as Vocal Trash redefines the meaning of high impact entertainment. Led by co-creators / producers Steve Linder and Kelsey Rae, this award winning cast captivates audiences of all ages with a joyful and lasting experience. Vocal Trash tours globally on a relentless pursuit to bring people together utilizing the ununiversal language of song and dance.

'Exhilarating" - "Inspiring"... This is Vocal Trash.

# About the Creators

With electrifying energy and a golden voice, Kelsey has been wowing audiences all her life.

This beautiful “triple threat” hails from Seattle where she first stepped on the stage at the tender age of five – as the spunky orphan Molly in the beloved Tony Award-winning musical Annie. It wasn’t a “Hard-Knock Life” for Kelsey, rather a Hard-Work one as she went on to star in over 30 stage productions. Madison Avenue also came calling and she’s appeared in over a dozen major television commercials.

Kelsey says, “Being a part of this show has changed my life and I feel blessed to have the opportunity to help make a difference”. What a champ!

Bet you didn’t know that Kelsey;

- was honored to sing the National Anthem at a Seattle Seahawks game – a rare feat for an 11-year old.
- turned down the Mickey Mouse Club (the same year as Britney Spears and Justin Timberlake) to pursue a role on Broadway in Gypsy.
- is the choreography director for Vocal Trash.
- has achieved inner peace through bikram yoga.
- She is the creator of Vocal Trash’s THINK Program.
- She is a published author of the children’s book THINK... Before you throw it away! (5 stars on Amazon)

Steve was born in West Texas, kid brother to three fantastic sisters. He remembers there was always music playing in the house – from Jazz to pop. Steve’s Dad played drums in the 40’s and 50’s and this most certainly influenced this budding musician. He pursued drums and percussion throughout school, both in organized and informal groups. His mastery on the drums soon led to keyboards, trumpet, bass, and harmonica. As for his vocal talents, Steve downplays his abilities and considers himself a musician first. No matter, his many fans agree – Steve is a stand out front man and vocalist, not to mention his comedic skills.

But it is his heart that is perhaps his greatest asset. He says, “I have enjoyed a lifetime of love, laughter, and music. We’re all here to grow, share, and care. Without purpose, what is the point? I am grateful to have a Purpose.”

Bet you didn’t know that Steve;

- studied percussion performance at Hardin Simmons University.
- is the creator of Vocal Trash.
- produces and arranges all the musical numbers for VT.
- is also an accomplished photographer and takes all of VT’s promotional photos.
- is an award winning song writer.

# THINK... BEFORE YOU THROW IT AWAY

## Study Guide

**“Edu-tainment?”** - *Our future just may depend on it.* Through popular music and urban dance, a sure inroad to our youth, Vocal Trash, “the voice for the trash”, uniquely promotes green awareness, sustainability, recycling and anti-bullying to students from coast to coast and globally.

**The Cast** - *Making music in harmony with the environment.* Vocal Trash is made up of young professionals that utilize their craft for meaningful and lasting results. A green minded troupe, with a social conscience, Vocal Trash asks students to come along and celebrate life, our world and its people. This green minded ensemble encourages one to recycle their imagination.

**Teachers** - We have created the following study guide to help make your student’s experience with the “THINK Program” as impactful as possible. For many, it will be their first time viewing a live theatrical production. We have learned that when teachers discuss the performance with their students, before and after the production, the experience is more significant and long lasting. Our study guide provides post performance discussion topics, as well as related facts. These are just suggestions; please feel free to create your own activities and areas for discussion. We hope you and your class enjoy the show!

**Performance** - Along with original music that deals with inspirational content, Vocal Trash also replaces iconic and popular song lyrics with positive influential subject matter. This concept allows a unique opportunity to reach young minds by harmoniously fusing music with social awareness. In between musical numbers, the troupe will briefly touch on interesting facts, figures and stats concerning the topic at hand. During the performance, VT utilizes an extensive amount of industrial re-used, re-purposed and up-cycled props for anecdotal, thought provoking ideas. The combination of recycled instruments, ie. gas can guitar, tool box guitar and up-right milk-urn bass, coupled with a percussion section made up of trash cans, metal lids, plastic water jugs and other industrial items, lends itself to a unique and thought provoking presentation. Add singing and break-dancing to the mix and you've got a powerfully effective tool for encouraging young minds to significantly use their imagination as it relates to a sustainable eco-friendly lifestyle. The group incorporates items that would historically end up in landfills, demonstrating how objects that, at first glance, appear to be trash but can be made into something useful. Also, topics such as "clean energy" through proper nutrition and no drugs are addressed, as well as no bullying messages are emphasized throughout every performance.

**Post Performance** - Below, we've provided some basic "talking points" to go over and review with your students after the performance. These facts, stats and figures will help students connect the awareness factor, provided by our "THINK Program", with hard evidence, provided by, you, the teacher.

**Bullying Statement** - Vocal Trash believes in a caring, supportive environment in which individuals are encouraged and challenged to develop their strengths, interests, and talents.

## THINK Program

### Aluminum

-  A used aluminum can is recycled, and back on the grocery shelf as a new can, in as little as 60 days. That's closed loop recycling at its finest!
-  Used aluminum beverage cans are the most recycled item in the U.S., but other types of aluminum, such as siding, gutters, car components, storm window frames, and lawn furniture can also be recycled.
-  Recycling one aluminum can saves enough energy to run a TV for three hours -- or the equivalent of a half a gallon of gasoline.
-  More aluminum goes into beverage cans than any other product.
-  Because so many of them are recycled, aluminum cans account for less than 1% of the total U.S. waste stream, according to EPA estimates.
-  An aluminum can that is thrown away will still be a can 500 years from now!
-  There is no limit to the amount of times an aluminum can be recycled.
-  We use over 80,000,000,000 aluminum soda cans every year.
-  At one time, aluminum was more valuable than gold!
-  A 60-watt light bulb can be run for over a day on the amount of energy saved by recycling 1 pound of steel. In one year in the United States, the recycling of steel saves enough energy to heat and light 18,000,000 homes!

### Plastic

-  Americans use 2,500,000 plastic bottles every hour! Most of them are thrown away!
-  Plastic bags and other plastic garbage thrown into the ocean kill as many as 1,000,000 sea creatures every year!
-  Recycling plastic saves twice as much energy as burning it in an incinerator.
-  Americans throw away 25,000,000,000 Styrofoam coffee cups every year.

## THINK Program

### Glass

-  Every month, we throw out enough glass bottles and jars to fill up a giant skyscraper. All of these jars are recyclable!
-  The energy saved from recycling one glass bottle can run a 100-watt light bulb for four hours or a compact fluorescent bulb for 20 hours. It also causes 20% less air pollution and 50% less water pollution than when a new bottle is made from raw materials.
-  A modern glass bottle would take 4000 years or more to decompose -- and even longer if it's in the landfill.
-  Mining and transporting raw materials for glass produces about 385 pounds of waste for every ton of glass that is made. If recycled glass is substituted for half of the raw materials, the waste is cut by more than 80%.

### Paper

-  To produce each week's Sunday newspapers, 500,000 trees must be cut down.
-  Recycling a single run of the Sunday *New York Times* would save 75,000 trees.
-  If all our newspaper was recycled, we could save about 250,000,000 trees each year!
-  If every American recycled just one-tenth of their newspapers, we would save about 25,000,000 trees a year.
-  If you had a 15-year-old tree and made it into paper grocery bags, you'd get about 700 of them. A busy supermarket could use all of them in under an hour! This means in one year, one supermarket can go through over 6 million paper bags! Imagine how many supermarkets there are just in the United States!!!
-  The average American uses seven trees a year in paper, wood, and other products made from trees. This amounts to about 2,000,000,000 trees per year!
-  The amount of wood and paper we throw away each year is enough to heat 50,000,000 homes for 20 years.
-  Approximately 1 billion trees worth of paper are thrown away every year in the U.S.
-  Americans use 85,000,000 tons of paper a year; about 680 pounds per person.

## THINK Program

### Solid Waste and Landfills

-  About one-third of an average dump is made up of packaging material!
-  Every year, each American throws out about 1,200 pounds of organic garbage that can be composted.
-  The U.S. is the #1 trash-producing country in the world at 1,609 pounds per person per year. This means that 5% of the world's people generate 40% of the world's waste.
-  The highest point in Hamilton County, Ohio (near Cincinnati) is "Mount Rumpke." It is actually a mountain of trash at the Rumpke sanitary landfill towering 1045 ft. above sea level.
-  The US population discards each year 16,000,000,000 diapers, 1,600,000,000 pens, 2,000,000,000 razor blades, 220,000,000 car tires, and enough aluminum to rebuild the US commercial air fleet four times over.
-  Out of every \$10 spent buying things, \$1 (10%) goes for packaging that is thrown away. Packaging represents about 65% of household trash.
-  On average, it costs \$30 per ton to recycle trash, \$50 to send it to the landfill, and \$65 to \$75 to incinerate it.

### Miscellaneous Recycling Facts

-  An estimated 80,000,000 Hershey's Kisses are wrapped each day, using enough aluminum foil to cover over 50 acres of space -- that's almost 40 football fields. All that foil is recyclable, but not many people realize it.
-  Rain forests are being cut down at the rate of 100 acres per minute!
-  A single quart of motor oil, if disposed of improperly, can contaminate up to 2,000,000 gallons of fresh water.
-  Motor oil never wears out, it just gets dirty. Oil can be recycled, re-refined and used again, reducing our reliance on imported oil.
-  On average, each one of us produces 4.4 pounds of solid waste each day. This adds up to almost a ton of trash per person, per year.

# Recycling

## What's Recyclable:

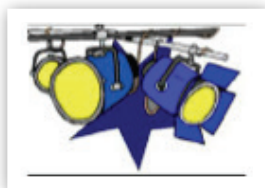

- Plastics marked #1 through #7 (look on the bottom – red plastic cups are #6, so they're ok)
- Newspaper
- Cardboard (corrugated boxes, cereal & cracker boxes, etc)
- Paper grocery bags
- Magazines, junk mail, stationery and envelopes (even window envelopes are ok)
- Glass bottles & jars (empty & rinsed)
- Aluminum/tin cans, foil, trays (again, rinse them out first)
- All plastic food containers marked #1 & #2
- Microwave food trays

## What's Not:

- Plastic wrap
- Plastic grocery bags
- Pizza boxes (because of the grease)
- All wax laminated cartons/containers (milk and juice cartons)
- Styrofoam (including disposable coffee cups)
- Frozen/microwave food boxes (trays are ok)
- Wax cereal/cracker box liners
- Paper towels, napkins, tissue paper
- Paper plates, soiled paper
- Aluminum foil boxes
- Fast food wrappers
- Food waste

Remember, if an item is covered in food, it is not recyclable. Food is one of the worst contaminants in the recycling process, and some estimates put the costs of irresponsible contamination in the neighborhood of \$700 million per year industry-wide. So please be sure to rinse out cups, cans, jars, etc before throwing them in the bin. Thank you!

## Theater Etiquette

Please review the **LOOK and LISTEN** information below with your students to help make your theater experience the best it can be.

### LOOK and LISTEN

Attending a live performance of *THINK... Before You Throw It Away* will be interesting and enjoyable for everyone if you remember to- **Look** for facial expressions to help you understand what the actors are feeling.

**Listen** in order to understand the communication between the actors. The performers in *THINK* need help from you, the audience. You are an important part of the play. Being an audience member in a theater is different from watching a movie or television show. The performers are in the same room with you and are affected by what you do. To do their best, the performers need you to watch and listen closely. Audience members also depend on your quiet attention during the performance so that they can enjoy their theater experience as well.

Enjoy  
**THINK... BEFORE YOU THROW IT AWAY**
